

## **ABSTRACT**

On Page 24 line 8 please replace with the following paragraph:

The invention provides a high speed PCI-to-PCI bridge structure and method of use thereof. One embodiment provides a first bus (240) adapted to facilitate data transfer, a second bus (215) adapted to facilitate data transfer, and a bridge (350) that couples the first bus to the second bus. The bridge is adapted to perform memory read, memory read line, and memory read multiple commands (from the first bus to the second bus). ~~Advantageously, the~~ The bridge (350) responds to the memory read multiple command differently than either the memory read or the memory read line command.
